Dear Customer:

Our records indicate that you are a net metered customer with a net negative (net excess) energy balance. In other words, the amount of electricity that your system generated is greater than the amount of electricity you consumed.

Maryland regulations require BGE to true-up the excess generation balance at this time. Therefore, BGE will convert the amount of the net excess energy balance to a dollar value based on the generation or supply portion of your electric rates. Distribution and transmission rates are not included in the calculation. You will receive the excess generation credit in a separate check.

Our records indicate you are buying your generation through WGL Energy Services, Inc during this time. The value of the net excess generation is calculated using the supplier's generation price for the period. BGE has contacted the supplier to provide the applicable rate.

Your balance to be trued up is:	381571 kWh
The applicable rate per kWh is:	\$0.05657
Your credit is:	\$21585.47

The credit amount is determined by multiplying the net excess balance (kWh) by the applicable Supplier rate. The net excess balance will be reset to zero starting with the next billing cycle and you can begin accumulating net excess generation going forward. Please be aware that the meter reading indices may not match prior readings due to adjustments needed to perform the true-up.

If you have any additional questions you may contact us by email at [mybillingrep@bge.com](mailto:mybillingrep@bge.com) with "net meter true-up" in the subject line. Or you may call BGE at 800.685.0123.

Sincerely,

A handwritten signature in black ink that reads 'Christopher Reif'. The signature is written in a cursive style.
